Blastwave FX Packs A Punch With New Movie Trailer Sound FX Collection

Detroit, MI – November 26, 2007: Blastwave FX, announces the **release of a new sound effects library called Spoilers™**.

Specifically designed with movie trailers and commercials in mind, **Spoilers is the ultimate high definition collection of commercial beds** for the editor that wants to put a powerful kick to their final cut. This collection has **300 stereo movie trailers and compositions with matching 5.1 surround files**, plus **200 high impact stereo imaging elements**, totaling over 3 hours of unique commercial ready sound effects on 4 DVDs.

Whether it's film, television, radio, or video games, with Spoilers, **editors can cut their project to high impact edit points** in commercial ready trailers and compositions, or mix and design elements, trailers, and compositions to **get a truly unique commercial bed that gives editors the punch they need** to draw attention to their production.

Each sound was **originally recorded at 24 bit 96k** to ensure the highest quality for today's production needs then **delivered as 24 bit 48k broadcast .wav files**. And, as with every Blastwave FX sound collection, **each file comes as an additional mp3 for quick referencing**.

Spoilers is a **Click N' Drag™ library**. That means that the entire collection can be clicked and dragged onto any hard drive and is conveniently cataloged with **embedded metadata** for easy search and retrieval in **Pro Tools, AVID, SoundMiner, NetMix, iTunes** and other popular sound library search engines. This collection is ready to use right out of the box. No more long searches, ripping, editing, or settling for close enough. With Spoilers, audio professionals can get instant access to the highest quality sound effects for any type of production.

Spoilers was created by producers and sound designers from the acclaimed Detroit Chop Shop, headed up by Ric Viers, **one of the largest independent producers of sound effects in the world**.

Spoilers will be **released on November 26, 2007**, and will be available through **www.blastwavefx.com** for an **introductory price of \$499**. More information on Blastwave FX and other libraries can be found at: **www.blastwavefx.com**.
